Terms of Requirements

1. You need to modify and configure the Advanced iFrame Pro plugin or create a new plugin. Using the Advanced frame Pro plugin we displayed the site 1688.com on our website page https://logistickz.com/1688-2/. We need to show 1688.com (image 1.1) on the desktop version of the site, and m.1688.com on the mobile and tablet versions (m.1688.com does not support adding to an iframe) (image 1.2).

The plugin should work with all 1688.com subdomains. (example: https://cui.m.1688.com/). When clicking on the content, the download must be inside the page, i.e. the user must not leave the site. And have a fully responsive iframe height.

Image 1.1 (desktop version)

Image 1.2 (mobile version)

2. It is necessary that the order button appears on the product pages in 1688.com (image 2.3, 2.4) and m.1688.com (image 2.6, 2.7). The order button appears only when the text "offer" appears in the website link 1688.com and m.1688.com. (image 2.8, 2.9). After the order, the product is added and the user is redirected to the checkout page (Woocommerce).

Examples of how it should work on the desktop and mobile versions of the site.
